

DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

1. **Strings**

When programmatically building up strings, use template strings instead of concatenation.

Why? Template strings give you a readable, concise syntax with proper newlines and string interpolation features.

2. **Functions**

Spacing in a function signature.

Why? Consistency is good, and you shouldn't have to add or remove a space when adding or removing a name.

3. **Modules**

Do not include JavaScript filename extensions

Why? Including extensions inhibits refactoring, and inappropriately hardcodes implementation details of the module you're importing in every consumer.

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

1. Never use `arguments`, opt to use rest syntax `...` instead.

Why? Because using arguments allows us to be more detailed and I still don't get how to use ...

2. Do not pad your blocks with blank lines

Why? Because blank lines makes a code to be clean and legible

3. Do not add spaces inside brackets.

Why? Not adding space makes the code to be congested.

4. Strings that cause the line to go over 100 characters should not be written across multiple lines using string concatenation.

Why? Long line strings are tiring, if they're not broken.
